Instruction

Flutter version: Flutter 3.3+ (Null safety enable)

Set up guide:

1. Change application APIs URL. Use DEV, STAGING, PROD according to your project structure:

   (lib > configs > config_string.dart>> base_url)

2. Change Application name:

   (root folder > android > app > src > main > AndroidManifest.xml >> android:label=”Yor app name”)

   (lib > configs > strings.dart >> appName = “Your app name”)

3. Change your application main theme color:

   (lib > const > colors.dart >> themeColor = “Your app theme color”)

4. Change package name:

   (android > app > build.gradle >> applicationId “Package Name”)

5. Change Application version code (If needed- Applicable for updating the application)

   (Root folder > pubspec.yaml >> version: version name + version number; ex- 2.0.1+2)

6. Application Icon Change: - Preferred icon format PNG

Rename your icon as wallet.png. Paste it in assets > icons directory. Replace your icon with existing icon.

Then run the following command in project terminal.

flutter pub get
flutter pub run flutter_launcher_icons

APK Build command for testing:

flutter build apk --split-per-abi
